

Absolute Security. Zero Friction.

Introducing MySecret: Military-grade, zero-knowledge transparent encryption built natively for Obsidian.

Gemini Notebook

The Obsidian Security Dilemma

Note-Locking Plugins

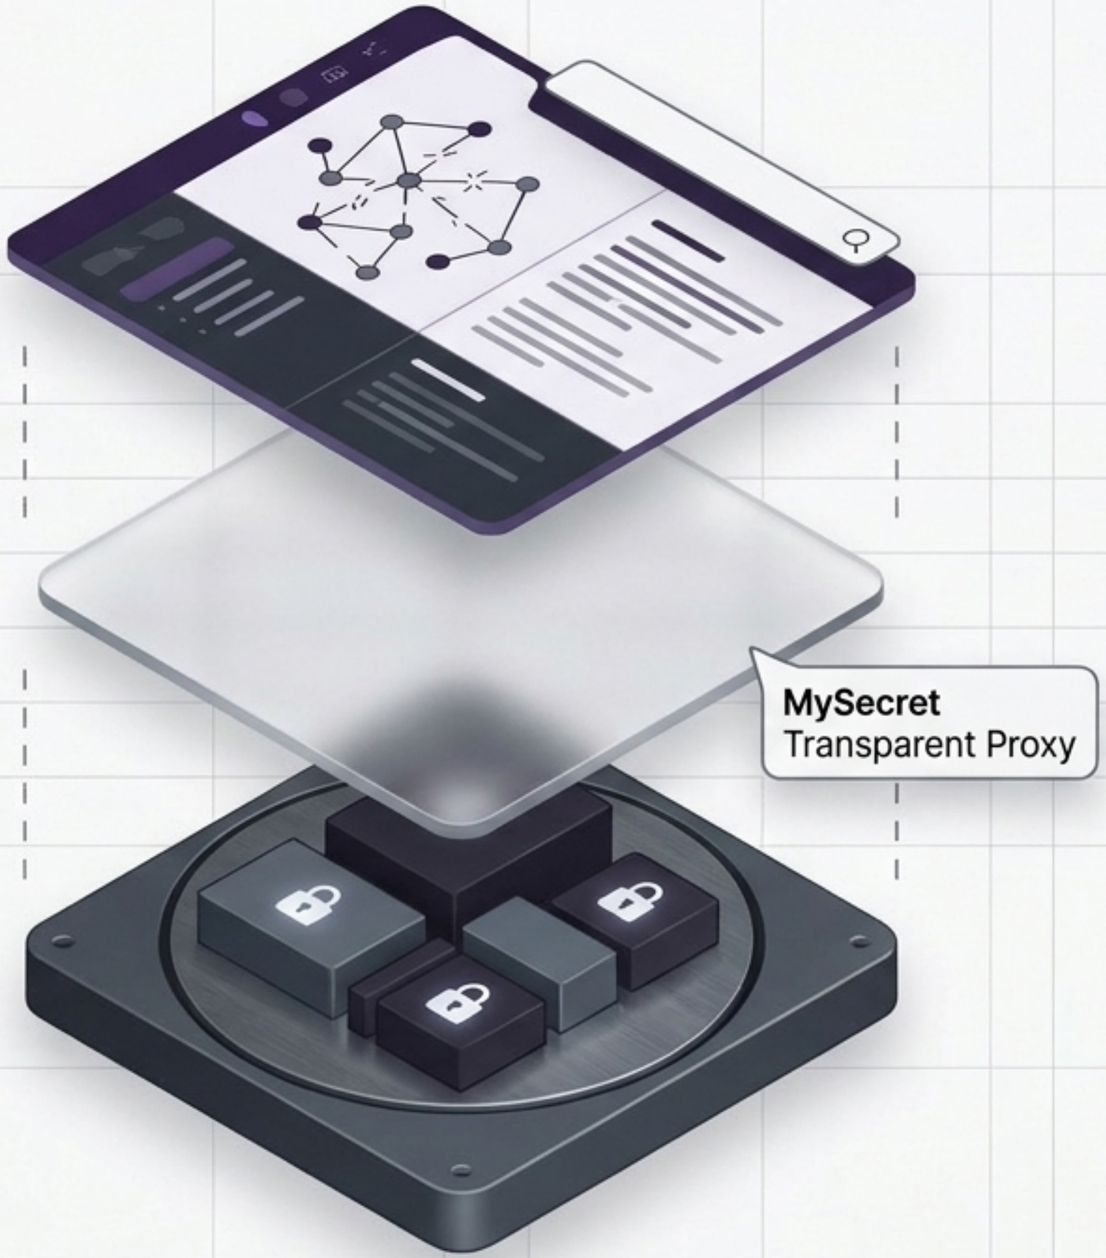

The Sacrifice of Function.
Locking individual notes breaks global search, severs back-links, and turns your Graph View into a fragmented mess.

External Virtual Drives

The Mobile Sync Nightmare.
External containers force clunky manual mounting and create fatal sync errors, making mobile access virtually impossible.

Gemini Notebook

The Paradigm Shift: Transparent Encryption

Why choose? MySecret eliminates the dilemma entirely. It integrates **transparent, zero-knowledge encryption** directly into Obsidian's adapter.

- Functions flawlessly in memory.
- Seals hermetically the millisecond it touches the disk.
- Zero disruption to your daily workflow.

Gemini Notebook

The Unfair Advantage

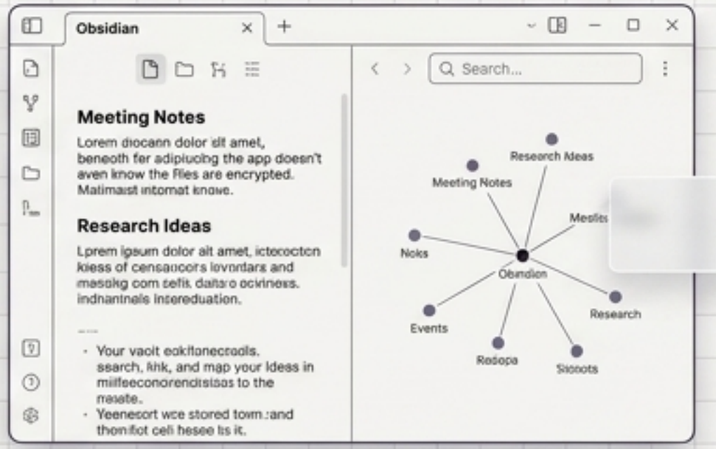

Capabilities	MySecret	Note-Locking Plugins	External Drives
Native Functions (Search, Graph)	100% Functional	Broken	Sync Collisions
Multimedia Encryption	Hardware Accelerated	Text Only	Yes
KDF Algorithm	Argon2id WASM	PBKDF2	Scrypt/Argon2
Mobile Experience	Fluid & Native	Manual	Severe Friction
Memory Security	Active Zeroization	Residual Plaintext	Variable

MySecret is the only solution architected for the native Obsidian ecosystem without sacrificing cryptographic rigor.

Gemini Notebook

Invisible Magic in the Adapter

Phase 1: Unlocked State

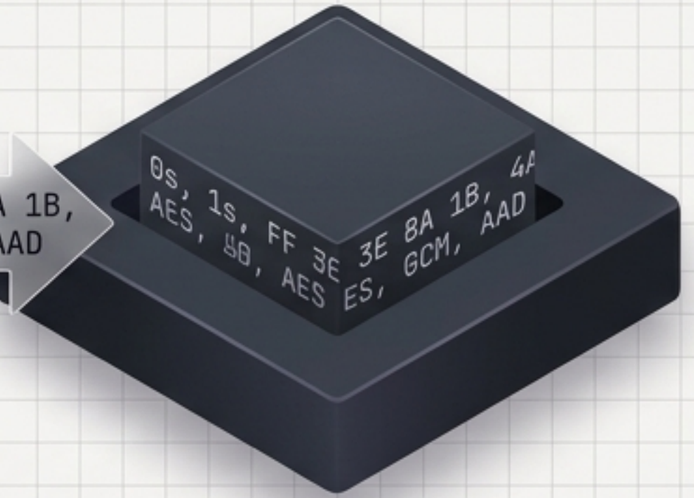

Save

Monkey-Patch Interceptor

0s, 1s, FF 3E 8A 1B, 4A, AES, GCM, AAD

Phase 2: Saved State

Zero Disruption

Because MySecret works silently beneath the surface, the app doesn't even know the files are encrypted.

Full Capability

Your vault remains perfectly fluid. Search, link, and map your ideas in milliseconds.

Hermetic Seal

Every save triggers an atomic, AAD-bound AES-256-GCM encryption before hitting your local drive.

Gemini Notebook

Total File Protection. Not Just Text.

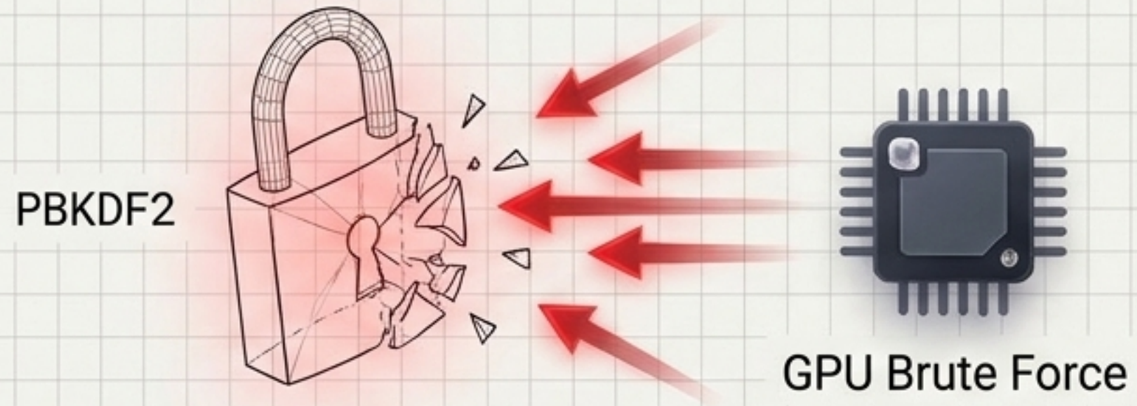

Traditional plugins leave your sensitive PDFs, ID photos, and confidential voice notes completely exposed in plaintext.

MySecret secures everything. It utilizes a compact binary header to apply the exact same military-grade hardware encryption to your multimedia files as it does to your personal thoughts.

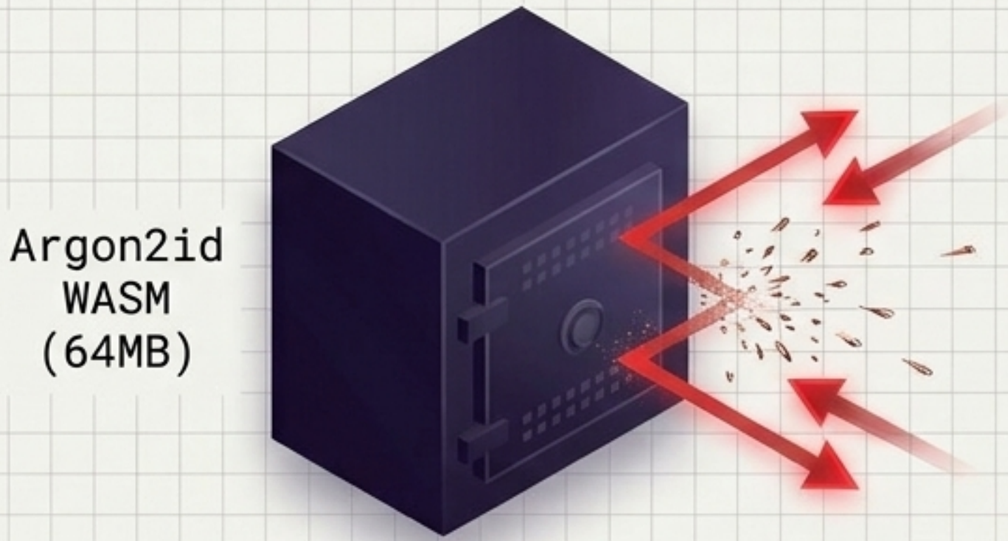

Gemini Notebook

Supercomputer-Resistant Cryptography

(The Vulnerability)

Most plugins use weak PBKDF2 iterations that a modern gaming graphics card can **crack millions of times per second**.

(The Fortress)

MySecret deploys **Argon2id**—compiled in WebAssembly. It forces attackers to burn 64 Megabytes of RAM per guess, mathematically neutralizing brute-force mining farms.

Gemini Notebook

Instant Biometric Unlock, Everywhere. (Yes, Even Android).

Desktop

Zero-config native integration with **Windows Hello** (DPAPI) and macOS/Linux Touch ID.

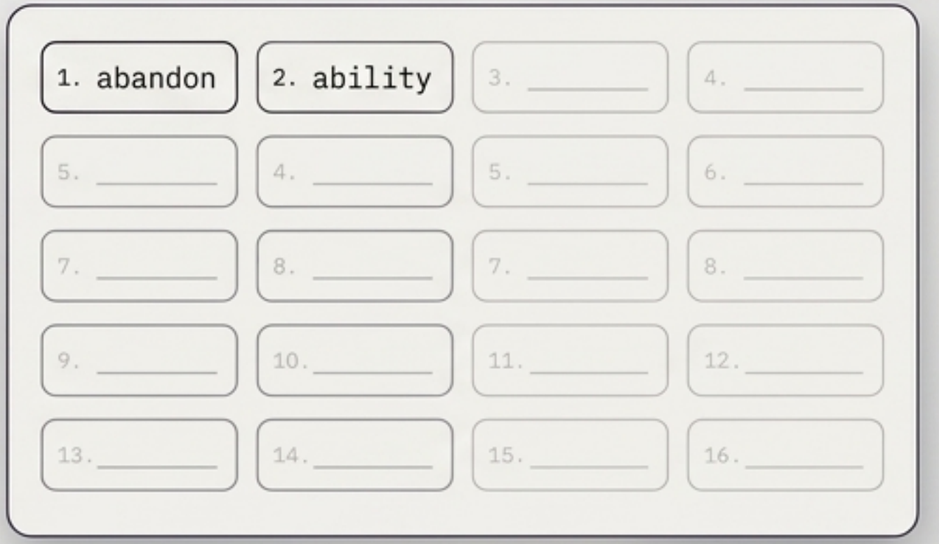

The Android Breakthrough

Obsidian's mobile app **blocks** native fingerprint access.

MySecret pioneered a **free, 1-click WebAuthn bridge.** It uses ephemeral ECDH cryptography to validate your biometric via your mobile browser, unlocking your vault in seconds.

Gemini Notebook

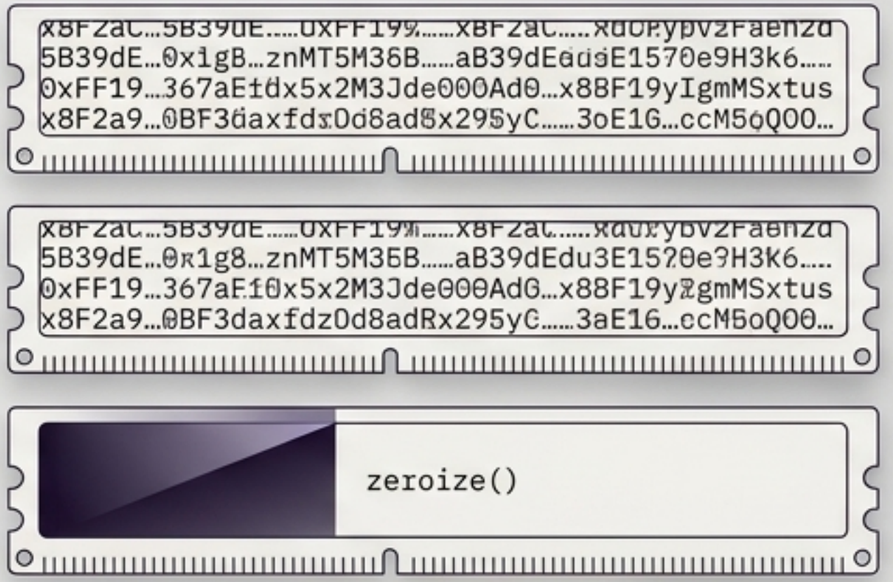

The 24-Word Safety Net

The Cold-Wallet Rescue.

Forget your master password? No problem. MySecret generates a BIP-39 standard 24-word seed phrase. You will never lose your life's work.

Active RAM Zeroization

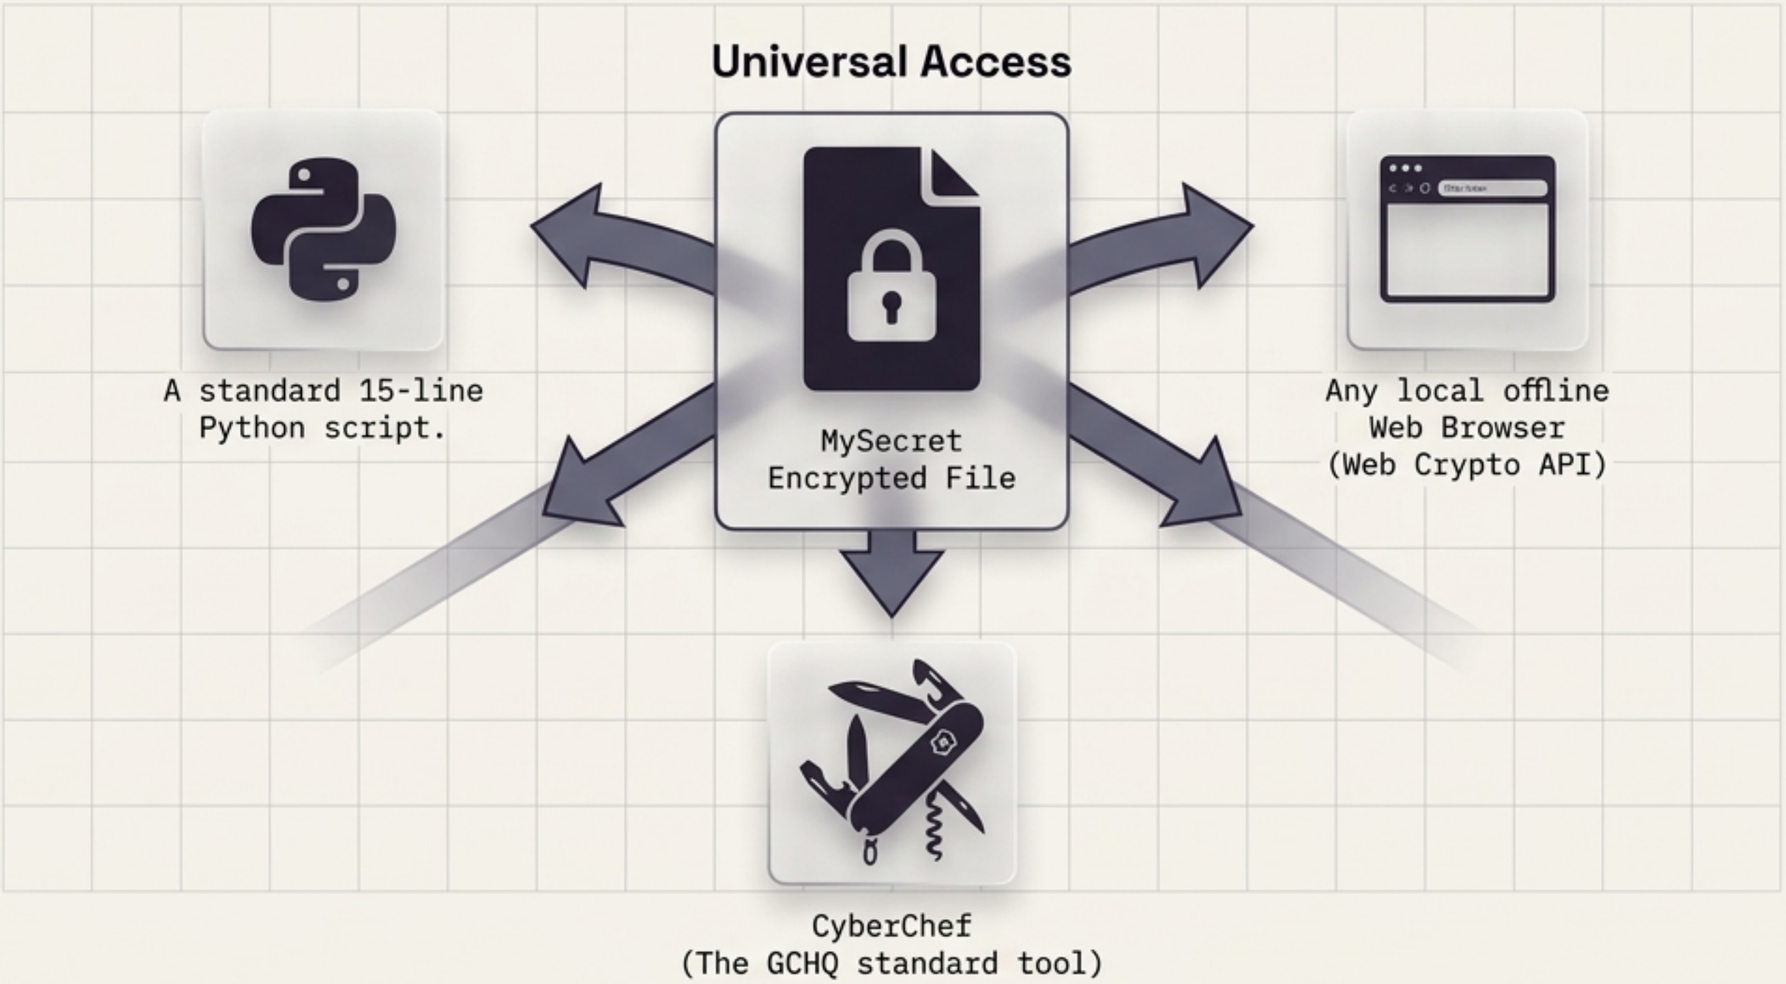

Active Memory Sweeping.

When you lock your vault or walk away, MySecret actively overwrites all cryptographic memory buffers with zeros, leaving nothing for malware to extract.

Gemini Notebook

Zero Vendor Lock-In. True Data Ownership.

What if Obsidian disappears? What if you uninstall the plugin? You are not trapped. Because MySecret uses open, global cryptographic standards (AES-256-GCM, BIP-39), your data outlives the software.

Gemini Notebook

Who is MySecret Built For?

The Diarist

Keep intimate thoughts, mental health logs, and family records safe from prying eyes or device theft without sacrificing Obsidian's beautiful journaling experience.

The Professional

Secure confidential code, clinical patient notes, legal dossiers, and patent drafts while easily complying with the strictest data privacy standards.

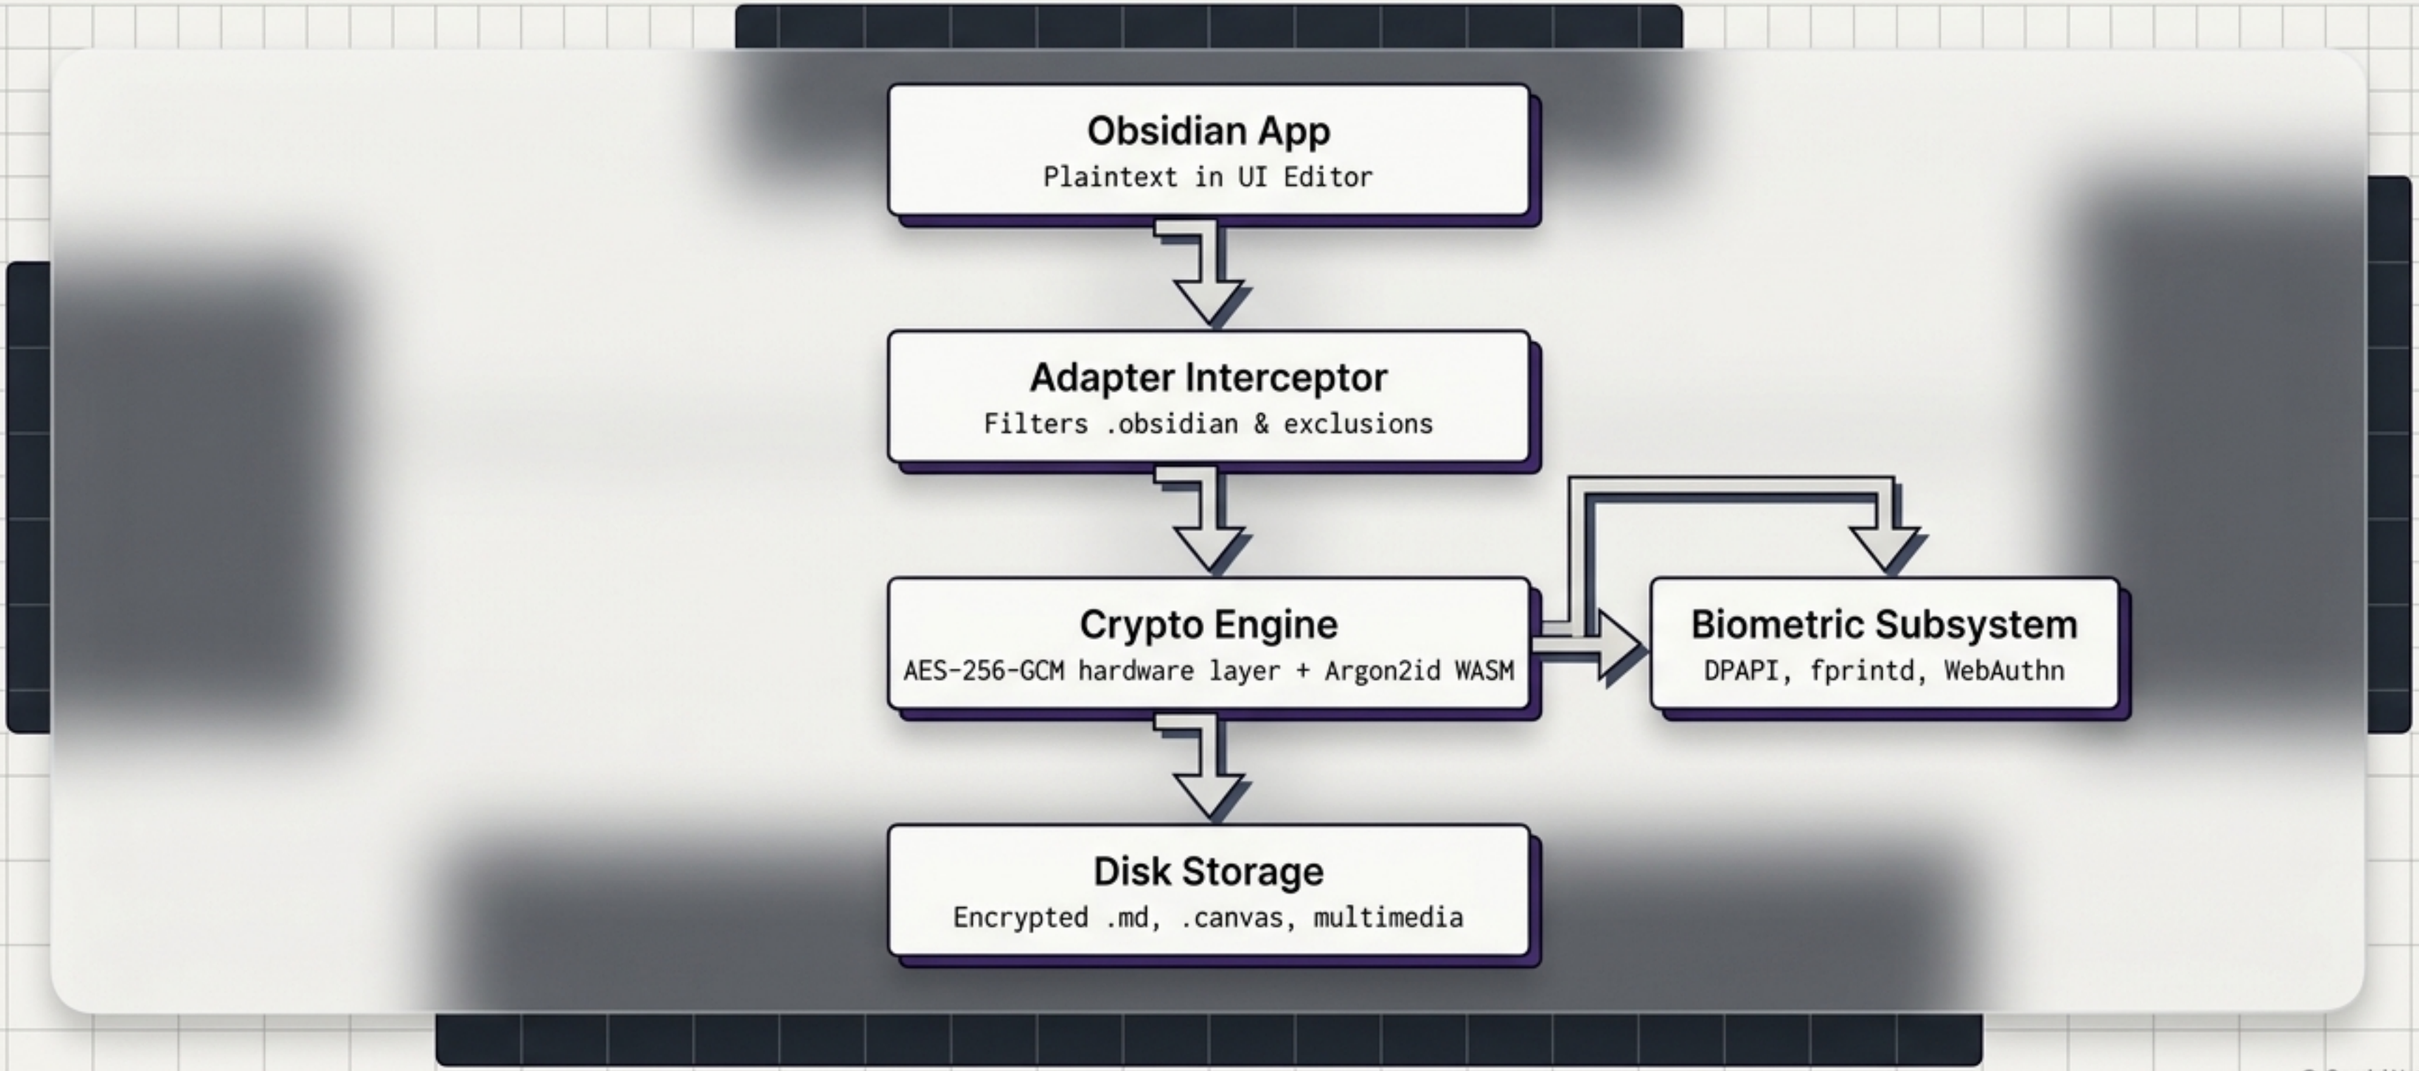

The Privacy Purist

Bring the exact same Zero-Knowledge, open-standard cryptographic philosophy used by cold cryptocurrency wallets directly into your digital second brain.

Gemini Notebook

The Architecture of Trust

A transparent proxy operating entirely in your device's memory. No servers. No telemetry. Fully open-source.

Gemini Notebook

Secure Your Second Brain Today.

Stop choosing between world-class productivity and military-grade security.

1. Open `Obsidian Community Plugins`.
2. **Search** for `MySecret`.
3. **Initialize** your impenetrable vault in under 60 seconds.
